1989	Joseph Wesley MacCallum Scholarship

Research Interests:

- Factors predicting emotion and physiological stress in young children, adolescents and adults in the context of their everyday lives including home, work and school contexts; especially the role of interpersonal relationships as elicitors and buffers of stress.
- Short-term effects of physiological stress for everyday functioning; cumulative effects of physiological stress on the development of emotional and physical health disorders and academic attainment.
- Social influences on sleep timing and quality in naturalistic settings using diary-based measures and actigraphy. Implications of short-term (day-to-day) changes in sleep for emotion and cognition and of individual differences in sleep timing and quality for health and academic outcomes.
- Racial/ethnic and socioeconomic disparities in stress, sleep, health and academic attainment; the impact of perceived discrimination on biological stress and developmental outcomes.
- Interventions to reduce stress, regulate stress biology, improve sleep and promote emotional and physical health and academic attainment in students facing discrimination or economic disadvantage.
